# Personalized Periodontal Medicine:

## A Team Approach for Dentists & Dental Hygienists

***Course Summary:*** Why do patients receive the same therapy and get different results? What do my patients really need regarding Periodontal Disease Therapy? Which patients are at greatest risk for disease progression and systemic risk? Are certain people at greater risk for restorative and implant failures? Should my protocol change to fit within the new science around biofilm infections? How can our team become more knowledgeable and make therapy more personalized for each patient? How do I get patients to accept treatment in today's economy? This lecture presentation will answer these and other intriguing questions related to the very latest in diagnostics and therapy. In this seminar, we will address the current knowledge regarding correct and evidence-based science, new & practical procedures, and addressing patient needs and concerns. Learn the 3 goals that every clinician must have before proceeding with treatment. Understand the 8 keys to more specific diagnosis, patient acceptance and successful periodontal therapy. Personalized Periodontal Medicine addresses these issues so that you can make informed decisions based upon science and not hype.

## *Presented by:* Dr. Thomas W. Nabors

Dr. Thomas W. Nabors received a DDS from the University of Tennessee in 1968 and practiced general dentistry for 38 years with a special emphasis on Anti-Microbial Periodontal Therapy and the incorporation of Molecular Diagnostic methodologies into the periodontal work-up. He retired from active practice in 2006 to co-found the first U.S. based medical laboratory for the dental profession: OralDNA Labs, Inc.: now a division of Quest Diagnostics. Dr. Nabors serves as Chief Dental Officer at OralDNA Labs. He continues as a member of the ADA, Mississippi & Tennessee Dental Associations, Academy of General Dentistry, American Academy of Periodontology, and Pierre Fauchard Honorary Society. He has lectured extensively on the subjects of the early diagnosis of Periodontal Diseases, non-surgical Periodontal Therapy and Molecular Diagnostics. Today, his topic includes how Saliva can now be used in dentistry and medicine for diagnosis of diseases and genetic variations. His topic will also include how DNA and Saliva are used for the diagnosis / treatment planning of Periodontal Infections as well as HPV related oral and pharyngeal cancers.

### *Course Topics and Objectives:*

·Periodontal Disease & HPV Oral Cancer: Life saving decisions
·Saliva: an "Old Friend" with Vitally Important Information
·Three goals you must have before any periodontal therapy
·Lasers, trays and theory: "Test Your Systems"
·DNA-PCR: A most significant discovery for oral medicine
·Antiseptics, LAA's, Systemic, Host-Modifying: which is best?
·Biofilm: correct information for each patient
·"One Size" of therapy does not fit all patient needs
·Achieving 95% treatment acceptance rate
·The One Change you must make for Predictable & Profitable Periodontal Therapy

### Course Information:

**Date**: **Friday, October 1, 2010**
**Time**: 8:00 am - 8:30 am – Registration
8:30 am – 4:30 pm – Presentation
**Location**: Baylor College of Dentistry, 6th Floor
**Credit**: **7 hours lecture**
**Course Fee**: **$185 Dentists; $95 RDH or Aux.**
**AGD Code**: 495 Non-surgical therapeutic management; 734 Clinical Diagnosis; 742 Medical Health History/Factor

***Continental breakfast and buffet lunch served***

***Fax This Registration to 214-874-4510 (Perio-Nabors: 10-1-10)***

**Mail to Baylor College of Dentistry, Business Office 5th Floor, 3302 Gaston Avenue, Dallas, TX 75246**
